

## NDT Products

NDT Products available from Seatronics

### ACFM

#### Lizard ACFM M8 NDT System

Provides uncompromising performance in one low cost instrument whether your need is Eddy Current, AC field Measurement or Field Gradient Inspection.

### CP Probes

#### Seatronics Diver ROV CP Contact/Proximity Probe

Seatronics Diver ROV COP Probe can be used for general offshore surveys. The system can be used either in CP contact or proximity modes.

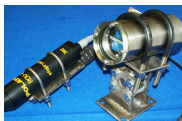

#### Buckleys Bathycorrometer MK V

Buckleys Bathycorrometer is an ideal subsea inspection tool for divers to determine the polarisation, corrosion and interaction status of an immersed structure.

#### Polatrak CP Stab Probe (Diver Operated)

Polatrak Probes can be used as stand alone in either tip, contact or proximity survey mode either by diver or ROV.

#### Polatrak ROV II CP Stab Probe (ROV Operated)

The Polatrak ROV II Stab Probe is a world leader in contact CP Probe and is manufactured with twin elements to allow online calibration.

### FMD Systems

#### Seatronics SeaPRO 500 Diver FMD System with 200m Umbilical

Specifically designed for diver operation to determine whether subsea steel enclosures are filled with water, gas or liquid by ultrasonic methods.

#### Seatronics SeaPRO 3000 ROV FMD System

Similar to above however the deepwater version is adapted to operate on ROV's to a water depth of 3000m.

### Leak Detection

#### Kongsberg OE2800 Pipeline Leak Detection System (OE1366F/1135F)

Allows easy detection of leaks during integrity testing and is based on the highly successful OE14-366 Colour Zoom Inspection Camera and the OE11-135 Mini Underwater Lamp.

#### Colmar Acoustic Leak Detection System

A fully developed acoustic leak detection system with specialised software able to determine and classify subsea pipeline or wellhead leaks. ROV/Diver systems available.

# NDT Products

NDT Products available from Seatronics

## MPI

### Birns Blackburn - I MPI System (Diver Operated)

Specifically designed to perform underwater Magnetic Particle Inspection (MPI) to locate and identify cracks and weld defects on underwater steel structures.

### RSL Subsea MPI System

A new style LED UV Light and Electromagnetic MPI system c/w ink bag and pump integrated into one portable subsea unit.

## Thickness

### Tritex Multigauge 3000 Diver Handheld Gauge

The Multigauge 3000 Underwater Thickness Gauge is a simple, robust ultrasonic thickness gauge designed for most common underwater thickness gauging applications.

### Tritex Multigauge 3000 Diver Handheld Display

The standard unit allows the diver to take measurements underwater. The large bright display gives a clear reading even in poor visibility conditions. Surface option available.

### Tritex Multigauge 4000 ROV Gauge (1000m/4000m)

The Multigauge ROV 4100 and 4400 Underwater Gauges are simple, robust ultrasonic thickness gauges designed to be mounted onto all types of work class ROV's.

### Cygnus 1 ROV Thickness Gauge (1000m/3000m)

Cygnus 1 ROV Thickness Gauges have been designed to mount on to most work class ROV's fitted with a manipulator capability to determine wastage and corrosion of subsea structures.

### Cygnus 1 Underwater Thickness Gauge (Diver Held)

Diver version similar to above with umbilical option available for surface read-out applications.

## UT Sets

### Panametrics Epoch LT Flaw Detector

The Epoch LT is the perfect solution when you need to perform quick, basic flaw detection in difficult field conditions.
